

Sketching software

Apex Medina™

The fastest, most intuitive sketching tool available.

In a few easy steps, Apex Medina transforms rough field sketches or plans to a complete professional-quality sketch. Even the most complex areas are automatically calculated, no matter how large or irregular the shape.

Upgrade from legacy versions of software easily

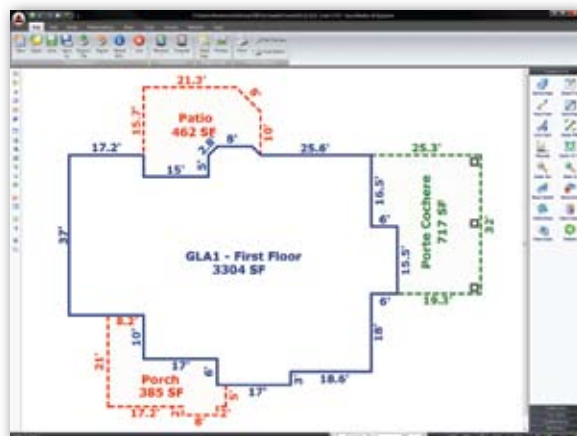

Whether your company has been using Apex v2 or v3, you will find yourself right at home with the new look of Apex Medina v4.1. All of the features you've grown accustomed to are exactly where you expect them to be, but now in an interface that is more informative and easier to use.

Draw duplexes or multi-family homes in half the time

Draw only one side of a duplex or multi-family home, and easily clone the area and flip it into place in half the time it took in previous versions to draw the same sketch.

Clone an area with all interior walls, symbols, and text labels

Not only can you clone your basic area, but now you can clone the area and everything in it. This is a great time-saver for drawing cookie-cutter homes or multi-family complexes.

PhotoMetrics takes sketching to the next level

Using PhotoMetrics, you can now import aerial photographs, building plans, or property record cards and quickly trace right over the top of the image to complete your sketch. Apex Medina includes a zoom cursor that lets you precisely draw any sketch and allows you greater flexibility in changing your image's appearance.

Multi-line split area

Quickly separate areas without drawing the common walls. This is a great way to remove the garage from the first floor when you sketch the entire perimeter first.

ADVANTAGES

- ▶ One-time fee — no subscription required
- ▶ Start sketching immediately without having to learn new drawing techniques
- ▶ Works standalone for commercial and other jobs
- ▶ Free technical support
- ▶ Online training helps you learn new time-saving features quickly

NEW FEATURES
